Online Education: A Panacea During COVID-19

The COVID-19 pandemic has disrupted normal routine of people across the globe. The school world has come to the rescue. Amongst many institutions schools have also shifted their base to virtual platforms to conduct classes online. Consequently, catering to the needs of all stages of education from pre-primary to university level, online education has emerged as an alternative to ordinary face to face classes. Accordingly, various stakeholders such as government and private organisations are trying their best to meet each other by launching up their existing online platforms, apps and providing training to teachers to use these apps and software for the students level. Moreover, efforts are being made by both government and non-government organisations and edtech companies to support the online system to make a smooth transition to the virtual world. For willing and motivated teachers, engaging promising parents for stakeholders such as teachers, parents and students are some of the important measures taken by the administration in the recent past. Making a continuous effort to provide continuous learning material available for online classes is another way of facilitating the schooling of children.

The Central government has recently launched the PM e-VIDYA platform, with 13 new DTH channels, one for each class to reach out to all areas of India. These efforts have proved beneficial to a wide range of the school-going population.

Examples: Can online learning compare with learning in traditional classroom? Are all students equal when online qualifications? Do we have a lack in the quality of online education, and at the proportion of one organization, which has been leading the way in providing internationally recognized online courses long before the arrival of COVID-19.

It is clear that the pandemic has utterly disrupted an education system that many [educational institutions](#) (including K-12 and higher education) were not fully ready for. While many schools continue to focus on traditional academic skills and [classroom learning](#), others are turning to digital learning and adaptability, which will be more effective methods of educating students? While some worry that the heavy [cost of digital education](#) could have hindered the goal, others appear to make a convincing case of their "new normal" after experiencing the benefits from afar.

Major world events are often an inflection point for rapid innovation - a clear example is the [COVID-19 pandemic](#). While we have yet to see whether the app will be emerging post-COVID-19, it is one of the best sectors where [education technology](#) has been made clear through the pandemic in the
